

LEASEY.AI

Current State Assessment

Content

PRELIMINARY - June 12, 2026

For

Juan Leal, CEO and CPO

Carlos Leal, COO

By

Walter Von Roestel, Content Lead

Table of Contents

1. Executive Summary
2. How content has been
3. How content should be
4. Distribution today, and where it needs to go
5. Search demand at a glance
6. AEO: where Leasey shows up in AI search
7. Open questions for the founders
8. Roadmap to end of June

1. Executive Summary

One line: Leasey.AI's content channels are dormant despite a strong inbound funnel; the fix is not a new strategy, it is publishing what we already have and turning the founder profiles back on.

The five things that matter for content

1. The founder profiles are the most powerful channel we own, and they are silent

- The Onboarding Guide says it directly: "the founders' personal profiles have more reach than the company page".
- Carlos has 8,000+ followers and posts roughly once a month. Juan has 2,000+ and posts even less.
- Target cadence per the guide: 3 posts per week from the company page, 1-2 per week from each founder.
- Real cadence today: near zero.

2. Nine 2025 announcements are sitting unpublished

- Repressed list: Zillow direct syndication, Facebook Marketplace direct syndication, centralised messaging, ID verification, Calendar v2.0, showing confirmation dashboard, billing tab update, SingleKey integration, Rental Beast partnership.
- Each is worth a blog, a LinkedIn post, and where applicable a Reddit changelog.
- At three pieces per announcement, that is 27 pieces of content already justified by product reality.
- The fastest content win available is a publishing schedule for these, not net new ideas.

3. Voice has been a moving target; it should not be anymore

- Three voice eras live on the site right now: the 2023 "goofy" agency voice, the current B2B operator-facing voice, and the founder voices on LinkedIn.
- The Onboarding Guide is explicit: do not replicate the 2023 voice.
- The team has the templates needed to standardise on Era 2 (operator B2B) and the two founder voices. We just need to apply them consistently.

4. The search demand already exists and confirms our positioning

- 705 clicks and 151,000 impressions in 28 days on www.leasey.ai (Google Search Console). 2,352 clicks and 585,000 impressions over 90 days.
- The site ranks for the category-defining queries (best property management software, automated leasing, rental syndication) but for several of them with close-to-zero click-through.
- This is an Alejandra problem to solve in detail; for content it is enough to know: demand is here, our topics are correct, the leak is at the title/meta layer and the cadence layer.

5. The Onboarding Guide gives me a clear job and clear deadlines

- By **Jun 30, 2026**: deliver the 90-day content calendar draft and a joint strategy document with Alejandra for the founders' review.
- By **Aug 29, 2026**: 60-day trial KPI evaluation.

- This Current State Assessment is the input to the strategy build that follows. It is preliminary today; finalised by Jun 27.

What I am recommending we act on this week

- 1. Publish the first repressed announcement.** Suggested first: SingleKey screening integration. Three pieces (blog, LinkedIn from Carlos, Reddit changelog).
- 2. Reactivate Carlos on LinkedIn.** One founder-voice post this week. Topic: an observation from a real operator conversation that ties to the Canadian-first positioning.
- 3. Publish Ivan's four already-drafted Reddit posts** in r/LeaseyAI. Drafts exist and only need a re-read.
- 4. Decide on blog.leasey.ai.** 39 clicks in 90 days. Either we invest with new posts and internal linking, or we sunset the subdomain.
- 5. Lock the founder review session** for the final CSA between Jun 23 and Jun 27.

What this document does not do

This is a current-state assessment from the content side, not a strategy document. It tells you where we are and what is obvious to do in the next two weeks. The 90-day strategy with the calendar, topics, formats per channel, and KPI commitments is the deliverable that follows, due Jun 30.

Alejandra is producing her own SEO assessment in parallel. Both feed the joint 90-day strategy.

2. How content has been

This is the diagnostic: what exists, in what voice, on what cadence, and what has actually worked.

2.1 Three voice eras still live on the site

Era 1 - Playful 2023 (En Algun Lugar Estudio)

Where it lives today: older posts at www.leasey.ai/blog/ (Tenant Taming, Unleash Your Inner Wizard, Tea on Student Rentals), all 12 posts at blog.leasey.ai/.

The 2023 brand voice document says: "Blogs should be written in a fun, conversational, casual tone. Get goofy, use metaphors, and toss a meme in there every once in a while."

The ICP that voice was written for: "male, 40+, not tech savvy, lazy, disorganised, managing 100-300 properties."

That is a different ICP than the enterprise / mid-market multifamily we serve today. The Onboarding Guide is explicit: do not replicate this era. But the posts are still indexed and still set tone expectations for new readers landing from search.

Era 2 - Current B2B operator-facing (the live voice)

Where it lives: the recent posts on www.leasey.ai/blog/ (Property Managers' Complete Guide to Facebook Marketplace, The Future of Your Rental Business, FAQs About Property Management Software).

Voice characteristics, sampled verbatim from the live blog:

- Second person ("you"), addressing the property manager directly
- Question or pain hook in the first two lines ("Still posting Facebook Marketplace listings one by one?")
- Problem-solution framing from line one
- Professional but approachable, light metaphors occasionally
- Numbered steps, comparison tables, scannable structure
- Leasey woven in mid-article, not just at the bottom
- "Schedule a call with Leasey.AI" is the house CTA phrasing

This is the active voice for blog, press release, and the LinkedIn company page. The template is repeatable.

Era 3 - Founder voices on LinkedIn

From the Onboarding Guide:

- **Carlos:** direct opener, max 3 sentences per paragraph, founder-authentic, never "Excited to announce", bilingual Colombia/Canada context referenced naturally.
- **Juan:** technical accuracy, ~60 words per post, leads with product milestones not relationship check-ins.

Both voices are documented but barely exercised in 2026.

2.2 Content inventory at a glance

Content type	Approximate count	Where	Voice era
Operator-facing blog posts	30+	www.leasey.ai/blog/	Mix of Era 1 and Era 2
Renter city guides	12	blog.leasey.ai/	All Era 1
Free tools (calculators)	4+	www.leasey.ai/resources/tools/	Era 2
Resource articles	many	www.leasey.ai/resources/	Era 2
Research articles	a handful	resources.leasey.ai/research/	Era 2, authoritative
Case studies	1 confirmed (Goldwynn)	resources.leasey.ai/testimonials/	Era 2
Press releases	unknown	TO CONFIRM if any are public	n/a
LinkedIn posts (company + founders)	very few in last 90 days	linkedin.com/company/leaseyai + founder profiles	Era 3 inactive
Reddit r/LeaseyAI posts	0 published	r/LeaseyAI	n/a

Full URL-level inventory with publication dates is part of the Jun 30 deliverable.

2.3 The 2025 repressed backlog (the most important inventory)

From the Onboarding Guide, in the guide's own order:

1. Zillow direct syndication launch
2. Facebook Marketplace direct syndication
3. Centralised messaging system
4. ID verification for showings and applications
5. Calendar View v2.0 (split layout, overlap tooltips)
6. Showing confirmation dashboard (SMS workflow)
7. Billing tab update (transaction filters, invoice downloads)
8. SingleKey tenant screening integration
9. Rental Beast partnership

Each one is a blog post AND a LinkedIn post AND, where applicable, a Reddit r/LeaseyAI changelog. **27 pieces of content that the product team has already justified by shipping the feature or signing the partnership.** Most of the work is editorial, not strategic.

Ivan has drafted the four Reddit changelog posts (showing confirmation, ID verification, Calendar v2.0, billing tab). Those four are publish-ready pending a re-read.

2.4 What has actually worked on the operator-facing site

From Google Search Console (90 days, www.leasey.ai). These are the pages that have brought the most clicks:

Page	Clicks 90d	Impressions 90d
Homepage	857	26,598
Security deposit calculator	112	12,074
"Best PMS - 4 popular options" blog	90	83,185
"Hidden gems on Facebook Marketplace"	73	18,554
Facebook Marketplace FAQ blog	68	26,004
Toronto lease takeover article	62	5,189
"Complete guide to FB Marketplace" blog	53	17,020
Marketplace Syndication feature page	31	5,577
Tenant income qualification calculator	31	14,674
Complete guide to property lease takeover	27	13,937

Three patterns to keep in mind

- 1. Facebook Marketplace content is our biggest cluster.** Three of the top ten pages. The repressed announcement on direct syndication slots cleanly into this cluster.
- 2. The free tools convert.** Two calculators in the top ten. Tools are content too, and they are working.
- 3. Long-form comparison content outperforms everything else by impression volume.** The "Best PMS 4 popular options" article has 83K impressions over 90 days — almost as much as every free tool combined.

2.5 What has not worked

- **blog.leasey.ai** generated 39 clicks across 12 renter-focused city guides in 90 days. That subdomain is effectively dormant.
- **The LinkedIn channels** (company page, Carlos, Juan) have produced near zero in the same window.
- **r/LeaseyAI** has not had a single official post yet.
- **No press release has gone out** despite nine repressed announcements waiting.

2.6 What I take away from "how it has been"

- 1.** We have a working voice template (Era 2 operator-facing). We do not need to invent it; we need to apply it consistently.
- 2.** We have a publishing problem, not a content problem. The content debt is concentrated and well-defined.
- 3.** The Facebook Marketplace cluster is a topical authority we should keep building on; it is already converting.
- 4.** blog.leasey.ai is at a decision point that founders need to make.
- 5.** The founder profiles are the most underused asset by an order of magnitude.

3. How content should be

The prescription. Topics, formats, voice, and the principles that decide what we publish and what we don't.

3.1 The principle that comes first

Content has to either bring in qualified operators or move a deal forward. Brand awareness is a side effect, not the goal. Per the Onboarding Guide and the SEO Knowledge Base, 100% of Leasey's client acquisition is inbound through SEO and content. That means every piece needs to be earning its keep against one of three outcomes:

1. Rank for, or reinforce, a category-defining search query (e.g. "property management software", "automated leasing", "rental syndication").
2. Build authority on a positioning pillar where we want to lead (Canadian-first, agent-not-widget, all-in-one, compliance-aware).
3. Move a qualified operator further down the funnel toward "Schedule a call".

If a piece does not do at least one of those, it does not get written.

3.2 The themes we should be writing about

Anchored to the 5 positioning pillars and validated against the search demand we already see (Section 5).

Theme cluster	Why now	Channel mix
Facebook Marketplace for property managers	Already a top cluster on our site; the FB Marketplace direct syndication is in the repressed list	Blog, LinkedIn, Reddit
Property management software comparisons	Highest impression volume on the site (83K on the "best PMS" article alone); we already rank	Blog (long-form), AEO answer pages
Canadian rental market and Canadian-first features	Pillar 4; SingleKey integration is in the repressed list; Carlos's natural voice anchor	Blog, LinkedIn (Carlos), PR
AI in leasing - agent vs widget	Pillar 2; the conversation has shifted from "AI yes or no" to "which one"; competitors validated the category in 2026	Blog, LinkedIn (Juan), PR thought leadership
Listing syndication and lead capture at scale	Pillar 3; Rental Beast partnership is in the repressed list	Blog, LinkedIn (company), Reddit changelog
Tenant screening and Fair Housing	Pillar 5; we already have research published; enterprise's #1 concern	Blog (long-form authority), PR thought leadership
Showings and tour management	Repressed list includes Calendar v2.0, showing confirmation dashboard, ID verification	Blog, Reddit changelog
Vacancy and lease-up operations	TEREZ-style anchors (154-unit lease-up in 60 days); Carlos's natural ground	LinkedIn (Carlos), case studies

Theme cluster	Why now	Channel mix
Founders' point of view	The market wants to hear from operators-turned-founders, not from a "marketing team"	LinkedIn only (Carlos + Juan)

Categories we should explicitly **not** write about:

- US tax content (1031 exchange and similar). The site picks up the impressions but they do not convert.
- Single-family landlord tips at the "5 properties or fewer" level. That was the 2023 ICP.
- Generic productivity or "future of work" topics. Off-positioning.

3.3 Formats by channel

Different channels reward different shapes. The 90-day strategy will commit specific cadences; this is the format-template intent.

Blog (www.leasey.ai/blog)

- **Long-form authority piece** (1,200-2,000 words): for cornerstone topics (Best PMS, Fair Housing AI, Canadian leasing). One per month is enough if the quality is high.
- **Practical guide / how-to** (800-1,200 words): for cluster-building (how to advertise on FB Marketplace at scale, how to syndicate listings, how to qualify leads). Two per month.
- **Product announcement blog** (600-900 words): for each repressed item. Anchored to operator outcomes, not feature lists. One every other week until the backlog clears.
- **Case study** (800-1,200 words): per signed client. TEREZ and Goldwynn are the priority refresh and Carlos has the relationships. Quarterly cadence.

All blog content uses the Era 2 voice template (second person, question hook, problem-solution, numbered steps, woven Leasey mentions, "Schedule a call" CTA).

LinkedIn

Profile	Cadence target (per Onboarding Guide)	Post shape
Company page	3 per week	Product announcements, data points, case study moments, partnership news
Carlos	1-2 per week	Founder observations from real client conversations, market reflections, strategic comments
Juan	1-2 per week	Product milestone notes ~60 words, technical observations, PropTech industry data

The hashtag and tone conventions are documented in `context/voices.md`. The system has dedicated writer agents for each profile.

Reddit

- **r/LeaseyAI (owned)**: software changelog format only. Title pattern: Leasey.AI [Feature] - [what it does in one line]. 1-2 paragraph body. Honest about limitations. Never promotional. Cadence: every product update, organically.
- **Community subs (r/PropertyManagement, r/Landlord, r/RealEstateInvesting, r/RealEstateTechnology)**: value-first replies and the occasional original post answering a real operator question. Maximum one Leasey mention per thread. Cadence: ongoing presence, not a publishing calendar.

Facebook Groups

Four target groups (Property Management Network, Canadian Property Managers, Landlords of Canada, Apartment Owners Association). Same rules as Reddit communities: value first, one mention max, no direct promo. Walter participates as a person, not as the company.

Press releases

Format: inverted pyramid, dateline (NY / Vancouver / Toronto), founder quote (Juan for product/technical, Carlos for strategy/relationship), market context with a sourced datapoint, boilerplate. Distribution targets already researched (MultifamilyBiz, Multifamily Press, Multi-Housing News, Multifamily Dive, Multifamily Insiders).

Trigger: each confirmed partnership in the repressed backlog (SingleKey, Rental Beast, Duuo, Sure, DoorInsight) deserves a real press release.

3.4 The voice rules that apply everywhere

These are the non-negotiables that the system enforces via the editor-qa step:

1. **British English** throughout (neighbourhood, organised, centralise).
2. **Oxford comma** required.
3. **"Leasey.AI"** stylisation in body copy.
4. **No em-dashes**. Use commas, parentheses, or periods.
5. **Insight-led**, with attribution. Every external statistic names its source in the text.
6. **Real operator anchors**. "154-unit lease-up in 60 days" beats "a large multifamily building".
7. **The CTA is always "Schedule a call"**, pointing to leasey.ai/get-started/.

3.5 What I want to be more deliberate about

Three things the historical content has done inconsistently:

1. **Naming sources for every statistic**. Anyone can write "studies show". Naming Yardi, Frontdesk Research, RBC, StatCan in the text is what builds AI-citation credibility and human trust.
2. **Anchoring to real client outcomes**. TEREZ, Goldwynn, Three Shores, Apartment Hub are referenced sparingly. Each one is a permission to cite a number. The system has them documented; we should use them more.
3. **Internal linking discipline**. Every blog should link to at least one feature page or tool. The Onboarding Guide flags this; Era 1 posts often do not.

3.6 What I take away from "how it should be"

1. We standardise on Era 2 voice across blog, PR, and the company LinkedIn page; Era 3 voices for the two founder profiles.
2. We work the existing themes first: FB Marketplace cluster, PMS comparisons, Canadian-first. We are already ranking; let's stop leaking.
3. Cadence beats cleverness. 3 LinkedIn posts a week from the company page, 1-2 from each founder, one blog per week, and the Reddit changelog as products ship.
4. Anything from the repressed backlog gets all three formats (blog, LinkedIn, Reddit) on the same week.
5. Every piece earns its keep against one of the three outcomes in Section 3.1, or it doesn't get written.

4. Distribution today, and where it needs to go

For every channel: where we stand now, what the Onboarding Guide asks of us, and what I think the right first move is.

4.1 LinkedIn company page

Today. [linkedin.com/company/leaseyai](https://www.linkedin.com/company/leaseyai). Described in the Onboarding Guide as "under-active". Recent posts are sparse and most of the reach lives on the founder profiles, not here.

The guide asks for. 3 posts per week, with the company voice (we, not I; institutional but direct; benefit-concrete).

Right first move. Reactivate with the SingleKey announcement. It is a partnership, which fits the company voice better than a founder voice. It also dogfoods Canadian-first messaging.

4.2 Carlos's LinkedIn

Today. 8,000+ followers. Posting roughly once a month. The posts that do go out are honest and well-received (year-end reflections, hiring notes, co-founder spotlights for Juan). Per the Onboarding Guide, his reach beats the company page.

The guide asks for. 1-2 founder-voice posts per week. Real observations from client conversations. Direct opener. Max 3 sentences per paragraph. Never "Excited to announce".

Right first move. One post this week, anchored to a real operator scenario (e.g. a TEREZ-style lease-up observation). The system has the agent already; what is needed is a one-time approval cadence between Walter and Carlos.

4.3 Juan's LinkedIn

Today. 2,000+ followers. Posts even less than Carlos. Voice when he does post is technical and precise.

The guide asks for. 1-2 product-voice posts per week. ~60 words. Lead with a product milestone or an industry datapoint.

Right first move. One product moment per week from the repressed backlog. The Calendar v2.0 or showing confirmation features are natural fits for Juan's voice.

4.4 r/LeaseyAI (owned subreddit)

Today. The subreddit exists. Zero official posts. Ivan has drafted four changelog posts during his handover (showing confirmation dashboard, ID verification, Calendar v2.0, billing tab).

The guide asks for. Posts must look like a real software company's changelog, not marketing. Title pattern, body length, honesty about limitations - all documented.

Right first move. Publish the four drafted posts this month. Zero generation effort; the drafts exist. After that, every product update goes here as a 1-2 paragraph changelog.

4.5 Reddit communities (r/PropertyManagement, r/Landlord, r/RealEstateInvesting, r/RealEstateTechnology)

Today. Zero official presence on any of them.

The guide asks for. Authentic participation. Value-first replies. Max one Leasey mention per thread. Build reputation as a knowledgeable voice over months, not as a publishing calendar.

Right first move. Walter establishes a Reddit account with some baseline karma (a few weeks of honest replies in r/PropertyManagement is enough). Then one helpful comment per day across the four subs becomes the steady-state rhythm.

4.6 Facebook Groups

Today. Zero official presence. The four target groups are Property Management Network, Canadian Property Managers, Landlords of Canada, Apartment Owners Association.

The guide asks for. Same rules as Reddit communities. Value first. Maximum one mention. Walter participates as a person, not as the company.

Right first move. Walter joins the four groups this week. Observes the first month. Begins helpful replies in month two. This is a 60-90 day initiative per the Onboarding Guide.

4.7 Press releases and contributed articles

Today. Zero outbound. Nine repressed announcements that would each justify a real press release.

The Onboarding Guide asks for. 5-10 PropTech / real estate media targets identified, a pitch for a contributed article drafted.

Where we have already done the homework. A mapped directory of outlets lives in context/distribution/pm-publications.md covering MultifamilyBiz, Multifamily Press, Multi-Housing News, Multifamily Dive, Multifamily Insiders.

Right first move. Send the SingleKey partnership press release to MultifamilyBiz and Multifamily Press in the same week the announcement blog goes up. Treat it as a coordinated launch, not a sequence.

4.8 The operator-facing blog (www.leasey.ai/blog)

Today. Lives. Has roughly 30 posts spanning Era 1 and Era 2. Most of the search traffic on the property comes here. The single highest-impression page on the entire site is here ("Best PMS 4 popular options", 83K impressions over 90 days).

The Onboarding Guide asks for. Cadence is implicit in the 90-day calendar deliverable; the editorial principles are explicit.

Right first move. Treat the blog as the primary publishing venue for the repressed backlog. One announcement blog per week. Era 2 voice. Internal link to the relevant feature page.

4.9 blog.leasey.ai (the renter subdomain)

Today. 12 city guides written in the Era 1 playful voice. 39 clicks in 90 days. Not in the operator funnel.

The Onboarding Guide does not address it directly. The renter funnel is not the core ICP.

Right first move. Founder decision required. Two options:

- Invest: refresh content in a current voice, add internal links, treat as a top-of-funnel content marketing play to homepage.
- Sunset: redirect to a relevant operator resource, retire the subdomain, free up the maintenance overhead.

Not deciding is the worst option.

4.10 The asymmetry

If I put every channel side by side and rank by "effort to produce one piece":

Channel	Effort per piece	Current output	Onboarding target	Gap
LinkedIn company page	Low (system writes)	0 / week	3 / week	-3
Carlos LinkedIn	Low (system drafts, Carlos approves)	< 0.25 / week	1-2 / week	-1.5
Juan LinkedIn	Low	< 0.25 / week	1-2 / week	-1.5
r/LeaseyAI	Trivial (4 drafts already exist)	0	4 immediately	-4
Reddit communities	Medium (real engagement)	0	Ongoing	full
FB Groups	Medium	0	Ongoing	full
Blog	Medium-high (system writes, founders review)	< 1 / month	~ 1 / week	-3
Press releases	Higher (per-piece effort)	0	5-10 outlets identified, pitches drafted	full

Every channel is at or near zero. This is not a strategy problem; it is a launch problem. The strategy can be the simplest possible; nothing moves until we ship.

4.11 What I take away from distribution

- 1. The fastest unlock is the four already-drafted Reddit posts.** Days of effort, immediate signal that r/LeaseyAI is a live channel.
- 2. Carlos's LinkedIn is the highest leverage per post.** One thoughtful post from him beats five from the company page.
- 3. The repressed backlog drives three channels at once** (blog + LinkedIn + Reddit changelog) for the product announcements, plus PR for the partnerships.
- 4. PR can wait until week 3-4** of the cadence; Reddit communities and FB groups can build in parallel as Walter's ongoing presence.
- 5. blog.leasey.ai needs a founder call this month** so we are not spending mental energy on a channel we may sunset.

5. Search demand at a glance

The detailed SEO analysis sits with Alejandra. This section is here only to give you the shape of search demand around Leasey so the content recommendations in this document are anchored in real numbers, not assumption.

All figures are live from Google Search Console, pulled Jun 12, 2026.

5.1 Three properties, very different traffic profiles

Property	Clicks 90d	Impressions 90d	Read
www.leasey.ai	2,352	585,188	This is the franchise. ~95% of visibility.
blog.leasey.ai	39	12,624	Effectively dormant.
www.silverhomes.ai	149	58,198	Steady at small scale (Carlos's adjacent site).

Whatever happens on www.leasey.ai is what moves the needle.

5.2 The shape of demand is good news

The site already ranks for the category-defining queries:

- best property management software and its variants (positions 5-17 across multiple phrasings, ~17K impressions over 90 days)
- automated leasing, rental syndication, leasing ai (our category language; positions 14-26)
- property management software (position 19.9, 1K impressions)
- A long tail of Facebook Marketplace queries (where we are strong)

Translation for content. The themes we want to write about are the same themes operators are already searching for. We are not chasing a new audience. We are optimising for one that is already raising a hand.

5.3 The single biggest content lever on the site

</blog/whats-the-best-property-management-software-4-popular-options/>

- 83,185 impressions over 90 days.
- 90 clicks.
- That is a 0.11% CTR.

A title and meta description rewrite on this single page, if it bumps CTR to even 1% (still below the position-average), unlocks roughly 800 additional clicks per quarter. This is Alejandra's call to execute. From the content side, this confirms that long-form comparison content is the highest-impression format we publish, and we should commit to it.

5.4 The Facebook Marketplace cluster is ours to keep

Three of the top ten pages by clicks are FB Marketplace content. That cluster generated roughly 35,000 impressions over 90 days. **The repressed announcement on FB Marketplace direct syndication lands directly into this cluster** - this is timing on our side.

5.5 The blind spots

These are real demand signals where we are barely showing up despite the queries matching our positioning:

Query	Impressions 90d	Pos	What is happening
ai property management software	279	45.4	Page 5 of Google. We need content for our exact category.
automated leasing	70 (28d)	26	Our category language. Page 3 of Google.
rental listing syndication	413	16.1	Page 2. We have the feature, the page just is not strong enough.
lease takeover apartment	331	10.9	Already on page 1 but CTR near zero. Title needs work.

Translation for content. Two implications. First, there are themes (AI property management software, automated leasing) where we are below page 2 - meaning we either do not have the dedicated content for them, or the existing content is not strong enough. Second, there are themes where the title is the problem more than the content. Both are fixable.

5.6 The branded search anomaly

The query leasey itself ranks at position 6.7 with 1,384 impressions over 90 days and 8.8% CTR. **A brand should sit at positions 1-3 for its own name.** Competitors like leadsy.ai and lease.ai are taking some of this traffic. Alejandra owns the fix; from the content side it is enough to know that brand-entity reinforcement (consistent "Leasey.AI" stylisation, founder bio pages, consistent company description) helps her case.

5.7 What I take away from search demand

1. The themes we should be writing about (Section 3.2) are validated by real search demand, not by guessing.
2. The Facebook Marketplace cluster is a real authority we already own and should keep building.
3. The "best property management software" comparison content is by a wide margin our highest-impression format. We should commit to producing more of it.
4. Long-tail product category queries (AI property management, automated leasing) are below page 2 - that is where dedicated cornerstone pieces will move the needle.
5. The detailed action plan (titles, meta, technical SEO, schema) is Alejandra's. From content, the takeaway is: we are not lacking demand. We are lacking publication.

6. AEO: where Leasey shows up in AI search

AEO (Answer Engine Optimization) is the new layer between us and our buyers. Property managers increasingly ask ChatGPT, Claude, Perplexity, or Google's AI Overview before they Google. Being named by those engines is high-leverage and content-led.

6.1 The infrastructure we already have

From the Onboarding Guide and the Feb 2026 SEO Knowledge Base:

Asset	State	Where
/llm-info/ page	Exists; intentionally for AI crawlers only (not navigation-linked)	www.leasey.ai/llm-info/
SEO Knowledge Base	Clean Q&A on identity, ICP, what Leasey is NOT, pricing, implementation	Internal doc (Feb 28, 2026); now mirrored in our system as context/aeo-faq.md
Research articles	Authoritative pieces on Fair Housing and algorithmic screening	/resources/research/
AI bot policy	Configured per Ivan's handover	Site-wide

The Knowledge Base is well-built for AEO. Three reasons:

1. Boundary statements are explicit ("Leasey is NOT a PMS", "NOT a chatbot", "no commercial leases", "no free trial").
2. Comparison anchors are clear ("Leasey vs spreadsheets", "Leasey vs generic CRM", "Leasey vs traditional lease management tools").
3. Entity definitions are tight and consistent across answers.

That is exactly the structure AI engines reward.

6.2 What is missing

Two big gaps:

1. **FAQPage schema is not implemented.** The Onboarding Guide flags it as a "one-time implementation, permanent AEO benefit". Until it ships, the Q&A on the site is invisible to extraction-based engines. This is Alejandra's task with the dev team.
2. **No live test of how Leasey actually shows up.** Today we are guessing. We do not know:
 - Does ChatGPT name Leasey when asked "What is the best leasing automation software?"
 - Does Perplexity cite leasey.ai when asked about Canadian property management?
 - Does Claude know what Liza is?
 - Does Google's AI Overview include leasey.ai for commercial-intent queries?
 - Are AI engines citing our Fair Housing research?

Until we run the test, AEO is opinion, not evidence.

6.3 The test I want to run before Jun 30

Engines. ChatGPT, Claude, Perplexity, Google AI Overview, Gemini.

Query set. Ten priority queries that mix commercial-intent, branded, and category-defining patterns:

1. "What is the best leasing automation software for property managers?"
2. "How do I automate tenant screening in Canada?"
3. "What is Liza by Leasey.AI?"
4. "Best alternative to ShowMojo for multifamily?"
5. "How do I list a rental on Facebook Marketplace at scale?"
6. "Property management software that integrates with Yardi?"
7. "AI leasing agent for 100+ door multifamily?"
8. "Fair Housing compliance for AI tenant screening?"
9. "What is Leasey.AI?" (branded)
10. "How fast can I lease up a 154-unit multifamily building?" (TEREZ scenario)

For each query, capture.

- Is Leasey.AI named? Cited with a link? Or absent?
- Which competitors are named?
- How is Leasey positioned (correctly per the SEO KB, or hallucinated)?
- Is /llm-info/ showing up as a cited source?
- For the branded query: is the Knowledge Base definition surfaced verbatim?

Output. A scorecard with one row per query, one column per engine. Becomes a baseline we can measure against quarterly.

6.4 What I can already say from the content side

Even without the live test, three content-level commitments make sense:

1. **Treat the SEO Knowledge Base as the canonical answer set.** Every blog FAQ section, every /llm-info/ update, every quote-style sentence about what Leasey is uses the same exact answers and boundaries. Consistency builds entity recognition for AI engines.
2. **Lead each blog section with an answer-pattern sentence.** "Property management software is X" or "The best way to handle Y is Z". AI extraction engines reward direct answer formats.
3. **Build out a "Leasey vs [competitor]" page per major competitor** (Tenant Turner, ShowMojo, Funnel Leasing, AppFolio). AI engines surface comparison content disproportionately for buyer-intent queries.

6.5 What I take away from AEO

1. The infrastructure is more built than it looks. The Knowledge Base and /llm-info/ are solid foundations.
2. The measurement layer is missing. The Jun 30 test closes that.
3. The FAQPage schema is the lowest-effort highest-value AEO fix on the table - one Alejandra-and-dev sprint.

4. From content, the discipline is: write to be cited, not just to be clicked. That means answer patterns, consistent entity language, comparison content, and named-source attribution everywhere.

7. Open questions for the founders

The calls only Juan and Carlos can make. I am surfacing them now so the answers can be in hand by the founder review session before Jun 30.

7.1 Strategic decisions

Q1. [blog.leasey.ai](#) - invest or sunset?

The renter subdomain generated 39 clicks in 90 days across 12 Era 1 posts. Either we invest with new posts in a current voice and internal linking, or we sunset and redirect.

What I need from you. A binary call.

What I will do with each answer.

- Invest: roll the subdomain into the 90-day calendar as a renter-acquisition top-of-funnel, refresh 3-4 posts to current voice, add internal links to the operator site.
- Sunset: 301 redirect to the most relevant operator resource, remove from the maintenance scope.

Q2. Approval flow for LinkedIn drafts

The system drafts posts in Carlos's voice and Juan's voice. They land in the dashboard. Today there is no defined approval rhythm.

What I need from you.

- Who reviews?
- What is the SLA from draft to publish (24 hours? 72 hours? Same day?)
- Veto rights or edit rights?

Why it matters. The cadence target is 1-2 founder posts per week each. Without a published SLA, drafts pile up and nothing ships.

Q3. Which of the nine repressed announcements have caveats?

The repressed list (Zillow direct syndication, Facebook Marketplace, centralised messaging, ID verification, Calendar v2.0, showing confirmation dashboard, billing tab, SingleKey, Rental Beast) is ready to publish per the Onboarding Guide.

What I need from you. Any of these that have a known product caveat, a contractual restriction with the partner, or a hold I should know about before publishing.

Why it matters. Avoid announcing a feature that is partially shipped or a partnership that is in flux.

Q4. Press release approval and contact

What I need from you.

- Must press releases go through legal review? Investor coordination?
- Is the press contact [VERIFY] flag in our PR templates a real address, or do we need to set one up?

Why it matters. Affects how fast we can pitch the partnership announcements (SingleKey, Rental Beast, Duuo, Sure, DoorInsight) to MultifamilyBiz / Multifamily Press / Multi-Housing News.

Q5. Founder bandwidth and identity

What I need from you.

- How many hours per week can each of you give to LinkedIn approvals?
- Are you OK with me running the SingleKey announcement under Carlos's voice (because of the Canadian-first angle), or do you prefer the company page?
- For Juan: are you OK with me publishing ~60-word product-moment posts on your behalf with the cadence we discussed?

Why it matters. The strategy depends on you both. The realistic cadence is whatever you can sustain, not whatever the guide says in the abstract.

7.2 Operational confirmations I need

Q6. Are Ivan's four Reddit drafts cleared to publish?

He drafted four r/LeaseyAI changelog posts during the handover (showing confirmation, ID verification, Calendar v2.0, billing tab). I will re-read them before publishing.

What I need from you. A yes that they can go out as-is, or a flag of anything that has shifted since Ivan wrote them.

Q7. What CMS does the operator site run on?

Per the Onboarding Guide Quick Wins (Section 27), Alejandra is meant to rewrite titles and meta descriptions. I need to know whether the title field is self-serve, or a dev ticket.

What I need from you (or from Ivan in the handover). The CMS, where the title and meta fields are editable, and who has access.

Q8. TEREZ - case study green light?

TEREZ is the strongest anchor in the system (154-unit lease-up, 60-day performance pilot, 0.5 month's rent per signed lease). I would like to commission a dedicated case study with quotes from SunPeak Property Management.

What I need from you. Permission to reach out, and any sensitivities around the performance-pilot economics being public.

7.3 Confirmations that are already in hand

For transparency, these were open at the start of this assessment and are now closed:

- The three GSC properties are URL-prefix (<https://www.leasey.ai/>, <https://blog.leasey.ai/>, <https://www.silverhomes.ai/>). Confirmed Jun 12.
- The Onboarding Guide's Jun 3 corrections (meta description approach, /llm-info/ being for AI crawlers only) are reflected in our system.
- The 2023 brand voice document confirms British English, Oxford comma, "Leasey.AI" stylisation - those are still in force.
- The Onboarding Guide is explicit about not replicating the 2023 playful voice; I will not.

7.4 What I take away from open questions

There is one strategic call (blog.leasey.ai), one cadence decision (LinkedIn approval flow), and the rest are operational confirmations. None of them block the Jun 30 strategy build; all of them improve the quality of it.

The next step from my side is to schedule the review session with you both for a date between Jun 23 and Jun 27. Walter will propose options.

8. Roadmap to end of June

How I get from preliminary today to the finalised Current State Assessment and the joint 90-day strategy Juan and Carlos asked for by Jun 30.

8.1 The constraint

The Onboarding Guide milestone is Jun 30: "Both Alejandra and Walter should have full tool access, a completed site audit (Alejandra), a content calendar draft (Walter), and a joint 90-day strategy document ready for founders' review."

So the internal deadline for this CSA is Jun 27. That gives Juan and Carlos two business days to review before Jun 30.

8.2 Week-by-week

Week of Jun 16-20

- Run the AEO scorecard across the 10 priority queries on 5 engines (one full day, blocked on calendar).
- Pull LinkedIn analytics export from the company page and both founder profiles.
- Send the request to Carlos for the open questions in Section 7 so we have his answers by the review.
- Begin drafting the 90-day content calendar (themes, formats, channels, publish dates). The Onboarding Guide expects this as the Jun 30 deliverable.
- Confirm the Reddit accounts (mine for community participation, the official one for r/LeaseyAI).
- Publish the first repressed announcement (SingleKey) - blog + Carlos LinkedIn + Reddit changelog.

Week of Jun 23-27

- Walk Juan and Carlos through the preliminary CSA in the founder review session (Walter proposes Mon Jun 23 PM or Wed Jun 25 PM).
- Update Section 6 (AEO) with the real scorecard data.
- Update Section 4 (Distribution) with LinkedIn analytics.
- Hard-bake the founder feedback into all eight sections.
- Lock the 90-day calendar with founder sign-off.

Jun 28-30

- Final pass on the CSA and the 90-day strategy.
- Hand both deliverables to Juan and Carlos.
- Plan the Jul 1 kickoff of cadence (3 LinkedIn / week, weekly blog, ongoing Reddit, etc.).

8.3 What the Jun 30 version contains that this Jun 12 version does not

Section	Today (preliminary)	Jun 30 (final)
1 Executive Summary	5 findings based on initial data	Same 5 findings tightened with AEO scorecard and LinkedIn analytics
2 How content has been	Sample inventory, voice analysis	Full URL inventory with publication date and voice era tagged
3 How content should be	Themes and formats committed	Same, plus committed publish cadence per channel
4 Distribution today and tomorrow	Channel map, current near-zero output	LinkedIn analytics for all three profiles, Reddit r/LeaseyAI subscriber count, FB group membership audit
5 Search demand at a glance	Single GSC pull (Jun 12)	Three weekly pulls showing trend (Jun 12, 19, 26)
6 AEO state	Infrastructure mapped, test plan defined	Live scorecard for 10 queries x 5 engines = 50 data points
7 Open questions for the founders	Eight open	Most closed
8 Roadmap	This document	Replaced by the 90-day calendar that Walter delivers

8.4 Update mechanics

Every weekly pull lives in a new dated folder:

- output/2026-06-12/current-state-assessment/ (today, preliminary)
- output/2026-06-19/current-state-assessment/ (week 2 deltas)
- output/2026-06-26/current-state-assessment/ (week 3 final)

The numbered files match across folders so the founders can diff between sessions. GSC data in data/ is repulled automatically each Monday at 10:00 UTC by a GitHub Action.

8.5 What I take away from the roadmap

1. The Jun 30 milestone is reachable on time without slipping.
2. The biggest single piece of work between now and Jun 30 is the AEO scorecard. One day of focused work.
3. The blog.leasey.ai decision is the only one that blocks strategy commitments. I need that before Jun 25.
4. From Jul 1, the deliverable shifts from "what is the state" to "what is shipping this week". The CSA stays as the reference baseline; cadence is what makes or breaks Aug 29.
